GETTING STARTED

Three Batriders, one credit. Put the game on your cartridge, choose how your display stands, and press START.

ARMED POLICE BATRIDER is RAIZING's 1998 arcade shooting game. **CHASE!** is an arranged mode by COIN-OP GAME STUDIO that sits beside the original game on one title screen: a chain to build, medals that fly to you, and a rank that stays within reach. This booklet is for the **N64 version**, which plays both games on the console with nothing on the screen but the game: on a display turned on its side, or on an ordinary upright television.

WHAT YOU NEED

- An N64 console with an **Expansion Pak** fitted. The game needs the full 8 MB and will not start without it (the screen stays black).
- A flash cartridge that runs a 49 MB ROM and gives it a **16K EEPROM** save. The ROM's header asks for both; a SummerCart64 reads it from there.
- A Controller in **socket 1**. The game is for one player.

Copy **batrider_n64_chase.z64** to the cartridge's card and start it from the cartridge's menu. No Controller Pak is used: the game saves to the cartridge by itself.

UPRIGHT GAME, SIDEWAYS OR UPRIGHT DISPLAY

BATRIDER is an upright game: the arcade cabinet's monitor stands on its short edge. The host menu's **SCREEN** setting (page 27) tells the game how your display stands:

SCREEN	YOUR DISPLAY	THE PICTURE
TATE A	On its side, turned a quarter turn **counter-clockwise** (its top edge on your left)	The arcade board's own picture, pixel for pixel, filling the screen. This is the setting a new cartridge starts with.
TATE B	On its side, turned a quarter turn **clockwise** (its top edge on your right)	The same picture, turned the other way.
YOKO 240P	Standing the usual way	The game upright in the middle of the screen with black bars at the sides, scaled to fit 240 lines: a little softer.
YOKO 480I	Standing the usual way	The same, on 480 interlaced lines: every line of the game kept, with interlace flicker on a picture tube.

TATE A on a display standing the usual way: the game's top is at the right. Turn the display counter-clockwise and it stands up.

YOKO 240P: the game upright on an upright television (simulated).

Whichever you choose, the game, its menus and the host menu read upright. The pictures in this booklet are shown upright.

> **CAUTION**
> Not every television is built to stand on its side. Use a display or a mount made to be turned, never block its vents, and do not turn a set while it is switched on.

POWER ON

The game comes up on the WARNING screen, then COIN-OP GAME STUDIO's logo, then the game's own opening. Press START at any of them to go to the

title screen. (The arcade board's power-on memory test is skipped.)

CONTROLS

CONTROL	WHAT IT DOES
Control Stick or ✦ Control Pad	Move the ship; move through menus
A	**SHOT** — hold to fire. In menus: choose
B	**BOMB**. In menus: go back
Z	**SPECIAL** — changes the options' formation. In CHASE!: the Chase Break
START	START on the splash, the title menu and CONTINUE?. **While a stage is running it opens the pause box**, and closes it
C◀	The pause box
L + R	Together: the host menu

OPTIONS can move SHOT, BOMB and SPECIAL among A, B and Z. The game's menus then follow: whichever button bombs is also "back".

> **NOTE**
> The N64 Controller has no SELECT button, so START does two jobs. Where the game asks for START it is START; while a stage is running it is the pause.

STARTING A GAME

The title screen has three choices. Move with up and down; A (SHOT) or START chooses.

START
A credit of the game the **MODE** is set to (below).

PRACTICE
One stage or one boss by itself, under that game's rules.

OPTIONS
Continues, the three buttons, the sound, the sound tests, and the original game's settings.

There are no coins: both games are in free play. Left alone for half a minute, the title gives way to the game's demonstration; START brings it back.

MODE: CHASE! OR THE ORIGINAL GAME

The host menu's **MODE** (page 27) chooses which game the title plays:

MODE	START PLAYS
CHASE!	A credit of the arranged mode: the chain, the magnet, the Chase Break, and a rank that runs between 50% and 75%. This is the MODE a new install starts in.
ORIGINAL	A credit of the original game, exactly as the arcade board plays it (page 21).

Each MODE keeps **its own rankings**, so CHASE! scores and original-game scores never share a table. A change made on the title takes effect at once. During a credit, the game asks first, and the change is made when the credit ends.

THREE CHOICES BEFORE TAKE-OFF

A credit begins with three screens. Each has a timer and takes the highlighted choice when it runs out.

SELECT COURSE

SELECT TYPE

SELECT TEAM

SELECT COURSE describes the course under the cursor at the foot of the screen.

COURSE	STAGES	WHAT IT IS
TRAINING	3	AUTO BOMBER: when you are hit with a bomb in stock, it goes off by itself. In the original game only: CHASE! has no auto bomb
NORMAL	5	NORMAL BOMBER: the intermediate course
ADVANCE	7	NORMAL BOMBER: the advanced course
SPECIAL	bosses	ONLY BOSS, FULL POWER UP: the bosses one after another, your ship at full power from the start

SELECT TYPE decides who flies.

SELECT TEAM
One of the three ready-made teams below.

TEAM EDIT
Your own team: pick any three riders, one after another. The screen shows each rider's machine, weapon and bomber.

RANDOM EDIT
Three riders left to chance.

SELECT PLAYER
One rider of your choice, who flies all three of the credit's turns.

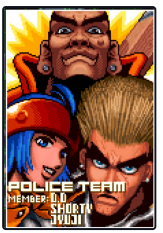

TEAM EDIT: a guest rider

THE RIDERS

TEAM EDIT and SELECT PLAYER show every rider on a roster of two rows: the nine Batriders along the top, and nine **guest riders** from RAIZING's earlier shooting games along the second. Left and right move along a row; up and down change rows.

THE TEAMS

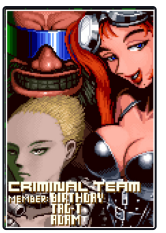

A team is three riders. They fly one at a time, in order: when one is shot down the next takes over, and the credit ends with the third. (In the original game, GAME SETTINGS can make it one to four: page 23.)

POLICE TEAM
D.D, Shorty, Jyuji

PSYCHIC TEAM
Maria, Golden, Strawman

CRIMINAL TEAM
Birthday, Tag-T, Adam

FLYING A BATRIDER

The stage scrolls up the screen. Shoot what comes, pick up what it leaves, and reach the boss with riders to spare.

	DEFAULT	
SHOT	A	Hold to fire. While the button is up, the shot charge builds.
BOMB	B	Your rider's bomb. Bombs are kept in stock along the bottom of the screen.
SPECIAL	Z	Changes the formation of the options flying with you. In CHASE! it is also the Chase Break.

Your ship is the one at the bottom. Its riders take turns: the team's icons at the top left show who is flying and who is waiting.

Small enemies fall to a few shots. Larger ones, and the ground targets among the buildings, take more — and leave more behind.

WHAT ENEMIES LEAVE BEHIND

Items are handed out in a fixed order that repeats: a medal, a power-up, a medal, a power-up, an option — five times round, the last of them a large power-up.

ITEM	
POWER / BIG P	Shot power-ups, small and large
OPTION	A gun pod that flies with your ship
BOMB / BIG B	Bomb stock, small and large
MEDAL	Points — see below
1UP	Brings back a rider who has been shot down

MEDALS

Each medal you collect makes the next one worth more, up a ladder of 19 steps:

100 · 200 · 300 · 400 · 500 · 600 · 700 · 800 · 900 · 1,000 · 2,000 · 3,000 · 4,000 · 5,000 · 6,000 · 7,000 · 8,000 · 9,000 · 10,000

Let one medal fall off the bottom of the screen and the ladder starts again from 100.

RANK

The game watches how you are doing. Shooting, picking up items and staying alive push its **rank** up, and a higher rank is a harder game; losing a rider brings it down again. The original game lets rank run free. CHASE! starts it at 50% and never lets it past 75%.

BOSSES

Every stage ends with a boss, and every boss has a time limit. CHASE! counts it down in seconds at the top of the screen. When the time is up, the fight is over whether the boss has fallen or not.

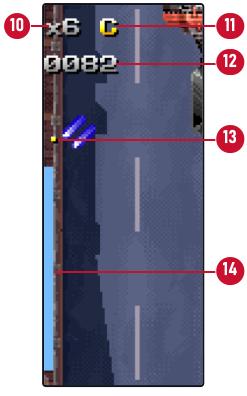

CHASE! MODE

THE CHASE! SCREEN

A CHASE! credit redraws the top of the screen and adds a rail down its left edge. This is the whole game in two glances.

1. **Your score**
2. **The top score**, in amber
3. **Boss time** left, in seconds
4. **Your team.** A rider who is down is drawn dark
5. **Lives**: riders still flying plus extends in the bank. Red at one
6. **The stage line.** EXTEND, MAX LIVES and CASH IN (a Chase Break) flash here
7. **The boss's hit points.** Amber; red in its last quarter
8. **The boss's name**
9. **The CHASE tag**: this credit plays by CHASE!'s rules

10. **The multiplier**, x1 to x8. Amber at x8
11. **C**: a Chase Break is ready (x4 or better)
12. **The chain**: kills since the last break
13. **Forward mark.** An amber ^ while you fly in the upper half of the screen, a blue **v** in the lower half
14. **The chain timer**, draining down the screen. Blue; **red** when it is nearly out; **white** while a Chase Break's cooldown runs

THE HITBOX

The white disc in a red ring is the only part of your ship a bullet can hurt. Everything else of the ship may overlap a bullet freely. It is drawn at the ship's own level, so whatever the game draws above the ship covers it too.

It is shown in every credit, and the host menu's **HITBOX** item turns it off.

CHASE! MODE

THE CHASE! RULES

Everything CHASE! changes, on one page. The pages after it take the parts one at a time.

RANK
Starts at 50% and climbs to 75% at most. Losing a rider lowers it, never below 50%. A high multiplier makes it climb faster.

CHAIN
Every kill adds one. Sixteen kills raise the multiplier a step, to x8. Every kill pays its value times the multiplier.

TIMER
1.5 seconds, refilled by every kill — in full while you fly in the upper half of the screen, to one second in the lower half.

TIMER OUT
Above x1: two multiplier steps lost. At x1: the chain breaks.

SHOT DOWN
The multiplier and the medal ladder are halved, and the timer waits three seconds.

BOMB
Freezes the timer while it goes off, and for a second after.

MEDALS
Pulled to your ship when you are near them — from anywhere while SHOT is held. Dropping one from the tenth step or higher breaks the chain.

CHASE BREAK
SPECIAL at x4 or better: every bullet and small enemy becomes a medal; the multiplier goes back to x1 and rests five seconds.

EXTENDS
Every 1,000,000 points a downed rider returns. Five lives at most.

ENEMY AIM
Shots aimed at you are loosened when you fly close to the shooter.

RANK BETWEEN 50% AND 75%

A new CHASE! credit starts at rank 50%. From there the game raises it as it always does — a little every frame, more for shooting, items and extends — and CHASE! adds a push of its own for every multiplier step you hold above x1. At 75% it stops: no moment of a CHASE! credit is harder than that.

Losing a rider eases the rank back toward 50% and never below it. A continue puts it back to 50% exactly.

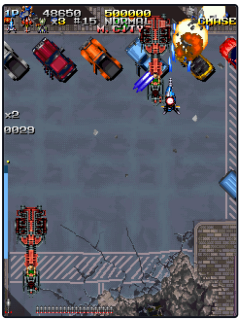

THE SETTINGS CHASE! PLAYS ON

CHASE! always uses the board's HARD difficulty with three riders, and replaces the original game's bonus rider with its own extends. GAME SETTINGS does not change it, and the TRAINING course's automatic bomb is off. It is a one-player game.

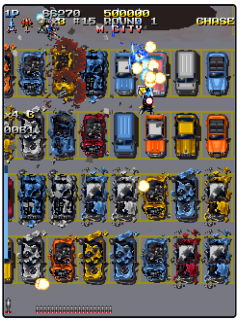

CHASE! MODE

CHAIN AND MULTIPLIER

Kill, and keep killing. The chain is a count of kills; the multiplier is what it is worth.

x2 — 16 kills

x4 — 48 kills

x8 — 112 kills and beyond

Every enemy you destroy adds one to the chain. Every sixteen raise the multiplier one step, from x1 up to **x8**, and everything you destroy pays its own value times the multiplier. The chain goes on counting past x8; it is the multiplier that stops there.

THE TIMER

A kill also refills the chain timer, the gauge on the left rail:

WHERE YOU ARE	A KILL REFILLS THE TIMER TO
FORWARD — the upper half of the screen	**1.5 seconds** (full)
BACK — the lower half	**1 second**

The forward mark on the rail tells you which it is. Push up the screen and the chain is easier to hold; hang back and every gap between enemies is half a second shorter.

> **TIP**
> Against a boss, your hits count toward the chain as well, and they hold the timer up between its waves. A boss fight is a good place to climb.

WHEN THE TIMER RUNS OUT

After a break: x1, and the count begins again.

Above x1 you lose **two multiplier steps**, and the timer is set to one second. If nothing dies in that second you lose two more.

At x1 the chain **breaks**: the count goes back to zero.

From x8, with no kills at all, that is four and a half seconds from a full timer to the break.

WHAT ELSE TOUCHES THE CHAIN

Shot down	The multiplier is **halved** (x8 becomes x4), the medal ladder is halved with it, and the timer is frozen for three seconds while the next rider arrives.
A bomb	The timer is **frozen** for as long as the bomb is going off and for one second after. Kills during it count.
A medal dropped	Letting a medal fall off the screen from the tenth step of the ladder (1,000) or higher **breaks** the chain.
A Chase Break	You spend the multiplier yourself: back to x1 (page 18).
A continue	Chain, multiplier and medal ladder start again.

A bomb going off: the timer waits.

The timer nearly out: the gauge turns red.

A boss in its last quarter: the bar turns red.

CHASE! MODE

MEDALS AND THE MAGNET

The medal ladder is the original game's. What CHASE! adds is a magnet.

Medals streaming to the ship.

A medal that comes within about a hundred pixels of your ship — some two fifths of the screen's width — is **pulled** straight to it.

Hold SHOT and the magnet reaches the whole screen: every medal on it flies to you.

Medals lying still on the ground — the ones a bomb shakes out of buildings — are pulled from anywhere, button or not.

The magnet works while your rider is flying. In the moment between one rider going down and the next arriving, medals fall as they always did.

TIP

The magnet makes the ladder much safer to climb, and the ladder is worth protecting twice over: a medal lost from the tenth step or higher costs you the ladder **and** the chain.

CHASE! MODE

THE CHASE BREAK

Trade your multiplier for a screen full of medals.

1. At x4 or better an amber **C** lights beside the multiplier.

2. Press SPECIAL: bullets and small enemies turn into medals.

3. The multiplier rests at x1 while the white gauge drains.

When the multiplier is **x4 or better**, pressing SPECIAL (Z) makes a **Chase Break**: you cash the multiplier in.

- every enemy bullet on the screen is canceled, and every **small** enemy destroyed — each paying its own score;
- each of them leaves a **medal of the ladder's current value**, which the magnet brings to you. If the screen has no room for more medals, the rest are paid straight into your score at the same value;
- the multiplier goes back to **x1** and the chain to zero.

Then the multiplier **rests for five seconds**. Kills still score, but they build no chain, and the rail's gauge shows the rest draining in white. There is no second Chase Break until you have climbed back to x4.

On the screen it goes by its short name: the stage line flashes **CASH IN** as it goes off.

Bosses are not small enemies. If there is nothing on the screen to take — a boss alone, no bullets — the press does nothing and you keep your multiplier.

TIP

A medal made by a Chase Break is a bonus, not a risk: if one of them does get away, the ladder is not reset.

NOTE

SPECIAL is also the button that changes your options' formation. For most riders the two do not collide. A few of the guest riders change formation with SPECIAL. For those, a **quick press** (let go within half a second) changes the formation, when you let go; a **long press** (held for half a second) is the Chase Break, and the formation stays as it was.

CHASE! MODE

LIVES, EXTENDS AND CONTINUES

The boss falls, the score passes a million: x4 lives.

EXTENDS

Every **1,000,000 points** earns an extend, and the stage line flashes EXTEND.

An extend brings back a rider who has been shot down; they rejoin at the back of the team. If nobody is down, the extend is **banked** and handed over the moment somebody is.

You can hold five lives at most — riders flying plus extends in the bank. An extend earned at five pays **100,000 points** instead, and the line flashes MAX LIVES.

The number beside your team's icons is the count of lives. It turns red at one.

CONTINUES

When the last rider goes down the game asks CONTINUE? and counts down. Press START to fly on with the same team.

A credit has **three** continues unless OPTIONS says five or seven. A continue starts the chain, the multiplier and the medal ladder again and puts the rank back to 50%.

PRACTICE has as many continues as you like.

CONTINUE? — START before the count reaches zero.

THE ORIGINAL GAME

With the host menu's MODE set to ORIGINAL, START on the title screen is ARMED POLICE BATRIDER as the arcade board plays it.

None of CHASE!'s rules apply: no chain, no magnet, no Chase Break, and rank runs free. It plays on the arcade board's factory settings — NORMAL difficulty, three riders, an extend item at every 1,500,000 points — unless you change them in OPTIONS' **GAME SETTINGS** (page 23). It is in free play, and the screen is the game's own, with no CHASE tag and no hitbox.

What both games share is everything around the credit: the title menu, the pause box, the continue limit set in OPTIONS and one player. Each keeps its own rankings.

PRACTICE

PRACTICE lists the game's seven stages and its eighteen bosses, each to be played by itself. Up and down move through the list, twelve lines at a time; SHOT starts, BOMB goes back. The stage is played by the rules of the MODE you are in, and the page says which: CHASE! or ORIGINAL.

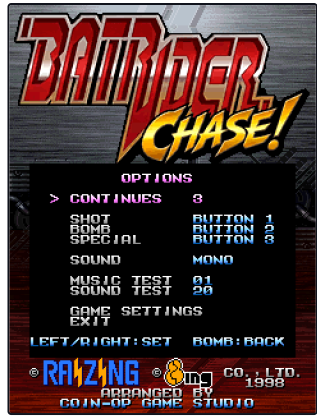

You then choose your team as usual, and the stage or the boss begins. A practice has unlimited continues, and it does not enter the rankings.

When it ends — or when you QUIT from the pause box — the title opens on a page with three choices: **REPLAY** (the same again, same team, at once), **SELECT STAGE** (back to the list) and **TITLE**.

STAGES	BOSSES
M.CITY · AIRPORT · SKY HIGH · S.SYSTEM · HIGH WAY · Z.CITY · BUILDING	CONFRICT · BAZZCOK · BOREDOM · DEVIATE · ENVY · SOBUT · BLUNT · GRUBBY · DISCHARGE · GOB-ROBO · TSUMUJIMARU · HAYATEMARU · BASHINET · BASHINET 2 · BASHINET R · BLACK HEART · B.HEART 2 · GLOW SQUID

OPTIONS

Up and down choose a line, left and right change it, BOMB goes back. What you set is kept (page 30).

CONTINUES 3 / 5 / 7

How many times a credit may continue. Both games.

SHOT / BOMB / SPECIAL BUTTON 1 / 2 / 3

Which button does what. Changing one exchanges it with the one that had that button, so the three always differ.

SOUND

MONO on this version: the N64's sound is one channel, and the line does not change.

MUSIC TEST 00 – 19

SHOT plays the tune.

SOUND TEST 20 – D7

SHOT plays the sound.

GAME SETTINGS

Opens the GAME SETTINGS page: the original game's own settings (below).

EXIT

Back to the title.

GAME SETTINGS

LIVES set to 4: ORIGINAL: SCORES NOT SAVED.

The arcade board's own settings for **the original game**. Left and right change a line; BOMB or BACK returns to OPTIONS. They are kept with the options.

	CHOICES (THE FACTORY'S IN BOLD)
DIFFICULTY	EASY · **NORMAL** · HARD · VERY HARD
TIMER	HIGHEST · HIGH · **NORMAL** · LOW: the board's timer setting, the time the bosses allow
LIVES	1 · 2 · **3** · 4: riders in the team
BONUS LIFE	NONE · 2000000 · **1500000** · 1000000: an extend item every so many points

Scores are kept only at the factory's settings. With any line changed, the page and OPTIONS say **ORIGINAL: SCORES NOT SAVED**, and an original-game credit ends without a name entry, leaving the rankings as they were.

CHASE! is not touched by this page: it always plays on its own fixed settings, and its scores are kept. SELECT PLAYER needs three lives: with LIVES at another number the original game's type select does without it.

PAUSING, AND THE END OF A CREDIT

INVULNERABLE turned ON.

THE PAUSE BOX

START or C stops the game where it is and opens the pause box; the music waits with it.

RESUME

On with the game. The pause button again does the same.

RESTART

The credit again from its first stage, at once, with the same team: no selects.

QUIT

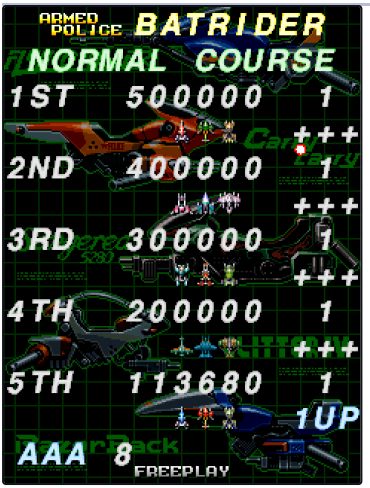

Ends the credit. A score good enough goes to the name entry.

INVULNERABLE OFF / ON

While it is ON your ship cannot be shot down. SHOT, START, left or right on the line changes it, and the box stays open.

CAUTION

INVULNERABLE is OFF as every credit starts. **The moment you turn it on, the credit's score will not be kept** — turning it off again does not bring that back — and the credit ends without a name entry. It works in CHASE!, in the original game and in PRACTICE.

The name entry. A score in the first five of its course takes three initials, against a countdown.

The ranking. One table a course, kept from one session to the next.

A credit whose score is not kept — INVULNERABLE turned on, or the original game played off its factory settings — shows the ranking without a name entry, and the rankings stay as they were.

A course that is cleared ends with the game's ending and its staff roll; TRAINING ends without them, as on the arcade board.

THE HOST MENU

The game is the arcade board's. The host menu is the cartridge's own: a few settings that have nothing to do with the game's rules.

Hold L and R together. The game **stands still** while the menu is open — not a frame passes — and the music plays on.

✦ **up / down**	Choose a line
✦ **left / right,** A	Change it
A **on RESUME,** B**, or** L+R	Close the menu

What you change is saved to the cartridge when the menu closes.

RESUME	Close the menu and play on.
HITBOX ON / OFF	The disc that marks the one part of your ship a bullet can hurt. It is drawn in every credit; new cartridges have it ON.
MUSIC 0 – 8	The music's volume. 8 is full.
EFFECTS 0 – 8	The sound effects' volume. 8 is full.
LANGUAGE ENGLISH / JAPANESE	The words on the COURSE and TYPE select screens: English, or the arcade board's own Japanese. Nothing else of the game changes; it takes effect at the next select screen.

SCREEN TATE A / TATE B / YOKO 240P / YOKO 480I	How your display stands (page 3): on its side with its top edge on your left (TATE A, the default) or on your right (TATE B), or upright (YOKO, on 240 lines or 480 interlaced). The line's help says which. It takes effect at once; a change between TATE and YOKO, or 240P and 480I, may make the television blink while it follows.
MODE CHASE! / ORIGINAL	Which game the title's START and PRACTICE play, each with its own rankings (page 6). On the title the change is made at once. During a credit the game asks first; the credit goes on in its own game, and the change is made when it ends (the line then says CHANGES WHEN THE CREDIT ENDS).
RESET SCORES+SETTINGS	Erases the rankings, or everything the cartridge has kept. It asks first: see below.

LANGUAGE: ENGLISH

LANGUAGE: JAPANESE

ERASING SCORES AND SETTINGS

RESET SCORES+SETTINGS opens a question with **NO** chosen. B, L+R, or NO leave everything as it is. Otherwise move to an answer and press A; pressing A again and again can never erase anything by itself.

NO

Nothing changes.

THIS MODE

Erases the rankings of the MODE you are in (page 6). The other mode's rankings, the OPTIONS and every setting stay.

ALL MODES

Makes everything a new cartridge's again: every ranking, the game's OPTIONS and GAME SETTINGS, and every setting of this menu — the hitbox on, both volumes 8, LANGUAGE English, SCREEN TATE A, with MODE back to CHASE!.

The menu then says THIS MODE'S SCORES ERASED or SCORES AND SETTINGS ERASED.

> **NOTE**
> The game is not restarted. A credit you are playing goes on, on the default options — but its score will not enter the new ranking. The rankings themselves are put back when the title screen next shows.

WHAT THIS VERSION LEAVES OUT

The other versions surround the game with gadgets and offer display filters. The N64 version shows the game alone: no gadgets and no scanline setting — at this resolution, on the television or monitor the console is meant for, the picture needs none.

WHAT THE GAME KEEPS

The arcade board forgets everything when it is switched off. This version does not.

Everything is kept on the cartridge, in its 16K EEPROM. There is nothing to do: the game writes what has changed, a little at a time, without stopping.

KEPT	WHEN
The host menu's settings: hitbox, music, effects, language, screen, mode	When the host menu closes with something changed
The game's OPTIONS: continues, the three buttons and GAME SETTINGS	When you leave OPTIONS with something changed
Each MODE's rankings: the first five of every table	When they change. They are written to three places in turn, so a power cut during a write leaves both modes' rankings as they were

> **NOTE**
> A flash cartridge writes its save file to the card in its own time — often only when you return to its menu or press its reset. See your cartridge's instructions before you switch off.

WHEN A SCORE IS SAVED

A score enters the kept ranking when its **name entry is over**, not while it is still climbing. Switching off during a name entry loses that credit's score.

Each MODE has its own rankings, with one table for each course: CHASE! scores and original-game scores are never mixed.

WHEN A SCORE IS NOT KEPT

Scores are kept only for credits played as the game is meant to be played. A credit is **not kept** when INVULNERABLE was turned on in its pause box (at any moment), or when it is an original-game credit with GAME SETTINGS off the factory's (OPTIONS then says ORIGINAL: SCORES NOT SAVED). Such a credit ends with the ranking shown and no name entry, and the rankings stay as they were. PRACTICE never enters the rankings.

STARTING AFRESH

The host menu's **RESET SCORES+SETTINGS** erases one mode's rankings, or all of it, after asking (page 27).

IF SOMETHING IS NOT RIGHT

WHAT YOU SEE	WHAT TO DO
The screen stays black at power-on	Fit an Expansion Pak. The game needs it and cannot say so without it.
The game is lying on its side	SCREEN in the host menu is set to TATE A or TATE B, for a display on its side. For an upright television choose YOKO 240P or YOKO 480I (page 3).
Nothing is kept from one day to the next	The cartridge must give the game a 16K EEPROM save. See also the note on page 30.
The picture slows where the screen is full	It can, a little, in the busiest scenes — the fourth stage most of all.
The score at the top or the TIME on the select screens is cut off	The television or the video adapter is cropping the edges of the picture (overscan); the game draws them whole. Set the television or the adapter to show the whole picture — often called Just Scan, Full Pixel or Screen Fit.
The title screen has no INSERT COIN	It is not meant to: both games are in free play, and the coin is the pause.

START does nothing on the title	Wait for the title to finish appearing; its menu takes input once it has.
The game started by itself	It did not: after half a minute without input the title shows the game's demonstration. Press START.
SPECIAL did not make a Chase Break	It needs x4 or better (the amber C), and something on the screen to take: bullets or small enemies. Five seconds must have passed since the last one.
My score was not entered: no name entry	The credit was not kept: INVULNERABLE was turned on in the pause box, or the original game was played with GAME SETTINGS changed (page 30).
START plays the other game	START plays the game of the host menu's MODE: CHASE! or ORIGINAL (page 6).
My scores are gone	Each MODE has its own rankings. Check that MODE is the one you played in.
The select screens are in Japanese	The host menu's LANGUAGE is JAPANESE. Set it to ENGLISH; it takes effect at the next select screen.

My chain broke and I was still shooting	Something has to die. The timer is refilled by kills (and by hits on a boss), not by shots.

NOTES

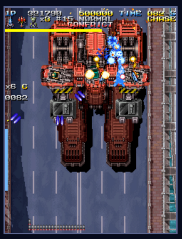

CHASE THE CHAIN.

Sixteen kills a step, eight steps, a second and a half to find the next one. Fly forward and the timer is yours; hang back and it is not. Medals come to you. And when the screen fills with bullets, one button turns every one of them to gold.

CHASE! and the original 1998 arcade game, each with its own rankings.
